

Important Note:**New Camera Setup (For both level 1 and level 2):**

- Students need to join meet from both phone and pc.
- You have to keep the phone in a manner where both hand, face and laptop screen are visible in the phone camera and they have to be on mute from one of the devices to avoid echo.

BE READY WITH YOUR OPPE LIKE CAMERA SETUP BEFORE THE VIVA STARTS:

- CAMERA SETUP DONE AFTER THE VIVA HAS STARTED WILL BE COUNTED UNDER THE 10-MINUTE RULE. IF YOU FAIL TO COMPLETE THE SETUP AND RUN YOUR APPLICATION WITHIN THIS TIME, YOU WILL BE MARKED AS FAILED (For Level 1 viva)
- NO RESCHEDULING WILL BE PROVIDED IN SUCH CASES.

Level 1 Viva Guidelines for MAD-1 and MAD-2

1. You will have 30 minutes to showcase your application. No additional time will be provided.
2. Level-1 Viva Requirements **(updated):**
 - If a student is unable to run their application without assistance from the proctor within the first 10 minutes, they will fail the viva. Additionally, if the proctor believes that the student has not completed the project independently, the student may be flagged for malpractice.
 - Students are required to demonstrate the core functionality of their application, answer 1–2 theory questions, and make code modifications during the Level-1 viva.
 - Students who have not created a GitHub repository or added the AppDev team as collaborators will incur a penalty of 6–7 marks on the theory questions.
3. If absent or unable to complete the demonstration within 30 minutes:
 - Rescheduling is not possible due to the high number of participants and limited time.
 - Your proctor will evaluate your performance based on what is demonstrated within the given timeframe (30 minutes).
4. Scoring and Progression:
 - If your score does not meet the minimum threshold, you will not qualify for Level 2.
5. Avoid unnecessary arguments with proctors; it may lead to disciplinary action against you.
6. **Any AI/LLM used in Code Editor during viva (both viva) will not be allowed. (new)**
7. **If used AI/LLM to create the project, mention how much percentage was used in the project report. (refer to this doc)**
8. You will receive the viva schedule email within 12-24 hours of scheduled time. If the email does not arrive, please wait patiently. (e.g. If your viva is scheduled for 10 AM tomorrow, you will receive the email by this evening.)
9. If your PC camera is not working at the time of viva use your phone camera. Be ready with the setup beforehand, don't wait for viva to start and do the setup there. Join the meet link 10 minutes prior to the viva timing.

Trivia: Average time for level 1 viva MAD-1: 15-20 minutes, MAD-2: 25-30 minutes

Have you submitted your project ? Not Yet ? [Check this video on how to upload the submission file](#)

Viva Preparation Checklist Before viva starts:

1. **Be Ready to Run the Code:** Ensure your project is fully ready to execute without delays.
2. **Open your Github Profile:** Open your github repository to show if you have added us as the collaborator.
3. **Celery Task Timing:** Know how to configure task timings before running Celery servers. (for MAD-2, not for MAD-1)
4. **Server Commands:** Keep all required server commands noted in a text file for easy copy-pasting.

5. **Keep ID Card Handy:** Open your student ID card on the browser to avoid delays.
6. **Checksum and File Testing:**
 - Validate the checksum using the script provided below.
 - If the checksum mismatches, follow the instructions to extract and revalidate (Proctor will help if needed).
7. **Avoid Debugging:** Skip virtual environments if they cause issues, install packages globally if needed.
8. **Test Core Features:** Focus on ensuring all major features work. **Any changes to the code will change the checksum.**
9. You can use previously created virtual environments(venv) **after running the checksum** to avoid wasting time:
 - If MAD-1 and MAD-2:
 - You can cut and paste already created the venv
 - If MAD-2:
 - You can cut and paste already created the node_modules (if using Vue CLI/Vite) or install it immediately using `npm install`

Generate Checksum:

Use the following script to create a checksum for a folder:

1. Run this command in your terminal/cmd/powershell
 pip install checksumdir and pip install zipfile
 If "no module named 'pkg_resources'" this error comes, use pip install setuptools
2. Create a python (check.py) file copy-paste this code in that file.
3. Add this file to the same directory where your unzipped folder is.
4. Run the checksum file using this code python check.py

```
# check.py
import checksumdir

# Replace "folder_name" with the actual folder path
hash = checksumdir.dirhash("folder_name")
print("Directory Checksum:", hash)
```

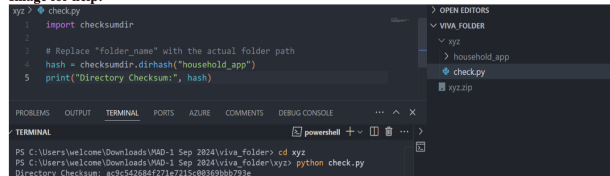

Folder structure

```
l-Viva Folder(New folder)
l-xyz.zip ( downloaded file)
l-xyz
l-app_folder (submitted folder)
l-check.py ( checksum file)
```

Note:

- Replace "folder_name" with the actual folder name or path.
- The checksum changes even with a single character modification in the project.

Image for help:

If Checksum Mismatches:

Steps to Follow (for macOS or other OS if needed):

1. Programmatically extract the ZIP file using the following script(create file named unzip.py):

```
from zipfile import ZipFile

# Replace "file_name" with the path to the ZIP file
with ZipFile("file_name", 'r') as zip:
    zip.extractall("Unzipped")
print("Extracted successfully to 'Unzipped' folder.")
```

2. Run the checksum script on the newly created folder (Unzipped):

```
import checksumdir

hash = checksumdir.dirhash("Unzipped")
print("Directory Checksum for Unzipped:", hash)
```

3. If the checksum still mismatches, ensure you are using the exact submission downloaded from the course portal and after the proctor confirms you can start your viva.

Note: If you are not able to pass the validation check, check out [this doc.](#) (for Mac users)

Pro Tip: Always test these scripts beforehand to avoid last-minute surprises.
